I. Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

After the plants have attained the height of about 6 in., they are earthed up. When the leaves turn yellow, it is a sign that the potatoes are ripe. The different kinds of sweet potatoes grown and the yam and another kind of esculent root—*u sohphlang* (*Flemingia vestita Benth.*) will be noticed under the head of "Crops."

The Khasis possess very few agricultural sayings and proverbs, but the following may be quoted as examples:—

(1) *Wat ju ai thung jingthung ne bet symbai ha uba sniew kti.*

Do not allow plants to be planted or seeds to be sown by one who has a bad hand.

As elsewhere, there is a belief amongst the Khasis that some people's touch as regards agriculture is unlucky.

(2) *Thung dieng ne bet symbai haba ngen bnai, ym haba shai u bnai.*

Plant trees or sow seeds not when the moon is waxing, but when it is on the wane.

(3) *Wei la saw bha ka bneng sepngi jan miet phin sa ioh jingrang lashai.*

A red sky in the west in the evening is the sign of fine weather to-morrow.

Cf. our English proverb "a red sky in the morning is a shepherd's warning, a red sky at night is a shepherd's delight."

CROPS.

The varieties of rice found in the Khasi Hills are divided into two main classes, one grown as a dry crop on high lands, and the other raised in valleys and hollows which are artificially irrigated from hill streams. The lowland rice is more productive than that grown on high lands, the average per acre of the former, according to the agricultural bulletin, as ascertained from the results of 817 experimental crop cuttings carried out during the fifteen years preceding the year 1898, being 11.7 maunds of paddy per acre, as against an average of 9.4 maunds per acre (resulting from 667 cuttings made during the
